

# OUR STORY

The Pacific Coast Building Products family originated in 1953 when a young man opened his business in Sacramento, California. Through humble beginnings of Anderson Lumber, owner Fred Anderson expanded his company into several building product-related businesses and has flourished ever since.

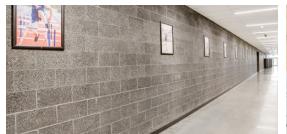

In 1979, Basalite® Concrete Products became part of the PCBP family. Today, Basalite has become one of

In 1979, Basalite® Concrete Products became part of the PCBP family. Today, Basalite has become one of the largest suppliers of concrete masonry products in Western North America. Our product lines include structural block, interlocking paving stones, wall systems, retaining walls,

ornamental and garden products and a full range of packaged concrete/mortar products.

# SPECIFY WITH CONFIDENCE

All our products are manufactured to meet or exceed CMU manufacturing standards for strength and durability. Our commitment to providing high-quality products and excellent customer service will ensure that your project will be customized to your needs.

Meet with one of Basalite's CMU experts to help with your project, from the initial planning stages through final engineering and approval.

#### LOCALLY MADE

Every Basalite CMU is proudly manufactured in our California facilities, allowing us to deliver precision-made products to you, wherever and whenever you need them.

### **CONCRETE** MASONRY

### CMU HAS MORE ADVANTAGES THAN YOU CAN IMAGINE

# MOISTURE PROTECTION & EFFLORESCENCE CONTROL

When it comes to moisture protection, you can specify an Integral Water Repellent (IWR) in both Basalite® block and mortar. During the manufacturing process we use Integral Water Repellent admixtures that are mixed throughout the concrete. The IWR increases resistance to wind-driven rain, moisture penetration, and reduces efflorescence.

### RESILIENCY

Buildings and structures with resilient design and materials can recover quicker following disasters, reduce green house emissions and improve the impacts of a building on the health and performance of occupants. Concrete masonry construction has inherent strength, durability, longevity, fire resistance, seismic and blast resistance all of which contribute to the resiliency of the built environment and can contribute to LEED credits

### COLORS & TEXTURES

Turn ordinary into a visual masterpiece by blending Basalite® colors, surface textures, sizes and shapes. We offer a large selection of Standard, Premium and special order colors that are available in Precision, Ground Face, Split Face and Shot Blast textures. Speak with your local product expert to get samples.

### THERMAL PERFORMANCE

Concrete masonry delivers excellent thermal performance. Fully grouted concrete masonry is considered a heavy mass wall according to California Energy Code. Because of this, a typical fully grouted wall system meets energy code standards without the need for insulation in many California climate zones.

### SHAPES & SIZES

Create unique and memorable design details with Basalite's variety of concrete masonry sizes and shapes. Recent additions to our shapes include a 32" long unit to create new elongated look.

## EPD COMPARISON TO BASELINE

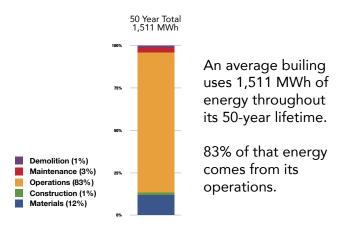

### **CEC PRESCRIPTIVE REQ'S**

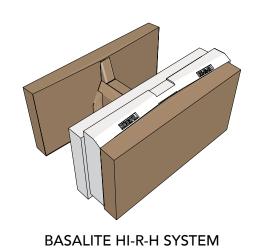

### DID YOU **KNOW?**

# LIFE CYCLE ANALYSIS OF ENERGY IMPACT

CMU is the low carbon option in structural concrete wall systems. CMU is naturally low in embodied carbon compared to other concrete products. This is because CMU has always been made using less cement than typical forms of concrete. Cement content is the main driver behind carbon impacts of any concrete product. Basalite and the CMU industry as a whole have been using factory controlled processes to drive down cement content without sacrificing strength. Basalite has introduced Type IL cement in our plants in California to further drive down carbon impacts.

Heavy mass walls with CMU provide passive cooling and meet or exceed California energy code standards without insulation. Its true! A standard 8" wide masonry wall exceeds CEC requirements and when left exposed to the interiors space will reduce loads on HVAC systems. Whats more, CMU can be incorporated into the interior to provide vertical mass and further enhance the passive characteristics of any space.

When aggressive energy standards must be met with insulation, Basalite offers an integral-insulation solution call Hi-R-H that combines the heavy mass of masonry with the benefits of insulation in one package. The HI-R-H system achieves low u-factors while the mass remains exposed to the interior offering passive cooling to the interior space.
