

ARCHITECTURAL CONCRETE MASONRY

[Serving Nevada]

SPECIFY WITH CONFIDENCE

All our products are manufactured to meet or exceed CMU manufacturing standards for strength and durability. Our commitment to providing high-quality products and excellent customer service will ensure that your project will be customized to your needs.

Meet with one of Basalite’s CMU experts to help with your project, from the initial planning stages through final engineering and approval.

CONCRETE MASONRY

CMU HAS MORE ADVANTAGES **THAN YOU CAN IMAGINE.**

MOISTURE PROTECTION & EFFLORESCENCE CONTROL

When it comes to moisture protection, you can specify an Integral Water Repellent (IWR) in both Basalite® block and mortar. During the manufacturing process we use Integral Water Repellent add mixtures that are mixed throughout the concrete. The IWR increases resistance to wind-driven rain, moisture penetration, and reduces efflorescence.

COLORS & TEXTURES

Turn ordinary into a visual masterpiece by blending Basalite® colors, surface textures, sizes and shapes. We offer a large selection of Standard, Premium and special order colors that are available in Split Face, Ground Face and Precision textures. Speak with your local product expert to get samples.

SHAPES & SIZES

Create unique and memorable design details with Basalite®'s variety of concrete masonry sizes and shapes. From a large 24" long block to specialty sills.

RESILIENCY

Buildings and structures with resilient design and materials can recover quicker following disasters, reduce green house emissions and improve the impacts of a building on the health and performance of occupants. Concrete masonry construction has inherent strength, durability, longevity, fire resistance, seismic and blast resistance all of which contribute to the resiliency of the built environment and can contribute to LEED credits

THERMAL PERFORMANCE

Due to the thermal mass of concrete masonry construction, some energy codes and standards require less insulation in CMU buildings than in equivalent light-frame structures. Although the thermal mass and inherent R-value/U-factor of CMU may be enough to meet energy code requirements (particularly in warmer climates), CMU buildings may need additional insulation.

The use of both Precision CMU and Split Face CMU gives this design two very different cement textures — this works beautifully alongside the metal elements.
